

Oregon's Public Water Supply Sources

Groundwater and Surface Water

Note on Public Water Supply Sources (Community and Non-transient non-community are shown): Groundwater source locations and types are from the Oregon Health Division Drinking Water Database Source Data Table as of December 1998. Not all sources in the database are shown. Location verification is in progress. Locations of most surface water intakes were field-verified with GPS by Oregon Department of Environmental Quality staff November 1998 through March 1999 and by U.S. Forest Service staff in late 1999. Where field-locations are not available, unverified locations from the OHD Drinking Water Database are displayed.

Public Water Supply Source Type

- Groundwater
- ▲ Surface water
